

Step 4 : SQL Queries

First of all I opened SQL Server Management Studio and Connect it. Then SQL Queries for business insights. Here are the steps

1. Create Database which is Sales
2. Create a table name is Cleaned_data
3. Insert all values from the table
4. Display all records
5. Show all products with price greater than 5
6. Find customers from the United Kingdom
7. Calculate total sales for each product
8. Find the top 10 best-selling products
9. Count the number of orders
10. Find the total revenue
11. Find the average product price
12. Find the customer who purchased the highest quantity
13. Find sales by country
14. Find the most expensive product
15. Find products with quantity greater than 10
16. Count customers in each country
17. Find duplicate invoice numbers
18. Then Find the top 5 customers by revenue

I have collected business insights above all the methods.
